## **A vision comes true**

Legendary Peter J. Lassen, known for founding Montana Furniture, is the designer behind GRID, a multi-purpose organisational system that allows for flexibility and purpose in every room.

*"When I designed the first GRID in 2004, I was developing my long-standing vision to create unprecedented flexibility in how we organise ourselves. Now this vision is a reality, and GRID is proof that a simple cube can give a home to all those little things in life that need space."*

# GRID

## A solution that suits you

Do you see a complete wall book shelf? Then you're not seeing GRID in its proper light. GRID doesn't dictate a certain solution, it is designed for you to make it your own. It isn't limited to one design and fit. GRID is a unique and flexible system that you can design to suit your lifestyle. With each GRID configuration, you can determine its height, width and depth. The basic building block is the cube, which can be infinitely repeated and personalised. The result is a system that matches your priorities - whether it is to create a room divider, a table, a wall book shelf, or a bedroom closet. Even better, the system can grow with you. If you move, you can take your GRID apart and re-design it to fit your new space. Welcome to a world of opportunities - not limitations.

Welcome to GRID.

## A closer look

A single GRID cube measures 40 x 40 x 40 cm and is created using a 12 mm nylon frame (PA6) with fiberglass. The frame comes in black or white and is equipped with mounting holes that are characteristic of GRID. Thanks to these holes, GRID is versatile and easy to work with. You can build your GRID to include shelves, solid sides, transparent acrylic sides, glass, mirrors, doors and drawers. The list of accessories also includes upholstered seats and poufs.

Add it all together and GRID is a durable, flexible, and practical solution that can be enjoyed in any space. Moreover, it's created with the environment in mind. GRID units are recyclable and can be melted and remade with little environmental impact.

Finally, GRID is made in Denmark by selected suppliers who specialise in quality. It's a solution that's designed by the best with your unique needs in mind.

Make your space your own.  
Take control with GRID.
